Currently, I'm using [UIImage imageNamed:] to fetch and get the images from disk, but I realized that fetching an image for the first time takes a good amount of time, and it's not really important to fetch the images at all times. So I'm trying to make an app that fetches images when the app is in the foreground. If the app is not in the foreground, then I cache the images, and when the app is in the foreground again, the images are fetched from the cache. So

I'm trying to write a class to do this. If I can't use multi-threading for this, I think I'll be 82157476af
